

PALAYESH PARAFFIN KHAVARAN

PRODUCT DATA SHEET

PRODUCT GROUP	DRILLING FLUID ADDITIVES	PRODUCT NAME
DRILLING FLUID ADDITIVES	PARAFFINIC CONTROLER	WAX-RI

PRODUCT

Khavaran Paraffin pour point depressants stop pipeline blockages during shut-ins and in seafloor crude oil transport. Liquid hydrocarbons produced from many oil and gas reservoirs become unstable soon after leaving the formation. Asphaltenes and paraffinic materials in the oil may cause poor flow ability or lead to flow-restricting deposits.

This can occur just about anywhere in your system, including the formation.

APPLICATION

Khavaran Paraffin pour point depressants stop pipeline blockages during shut-ins and in seafloor crude oil transport. Liquid hydrocarbons produced from many oil and gas reservoirs become unstable soon after leaving the formation. Asphaltenes and paraffinic materials in the oil may cause poor flow ability or lead to flow-restricting deposits. This can occur just about anywhere in your system, including the formation. Wherever system conditions change, organic deposition problems can arise and destroy production efficiency.

ADVANTAGES

HP/HT wells, shales and under pressured shales requires specialized drilling fluids and wellbore-strengthening techniques. Adding AQUA-SHIELD to WBM strengthens the well by:

- Repair formation flow and permeability.
- Effectively inhibit equipment-destroying deposits and plugs,
- Reduce separator interface problems
- Combat paraffin's and pour point challenges
- Prevent deposits from forming
- Yield and viscosity reduction

PACKING

Khavaran Paraffin offers a full range of AQUA-SHIELD in a variety of packaging formats. These include: bulk liquid (via tank truck or railcar), and brand new or used drums.
